< Vargrant 설치 및 환경설정 >

- * 참고사이트: https://github.com/hlkug/meetup/blob/master/000000/vagrant/hyperledger_indy/Getting_Started/READMEmd
- 1. Vagrant란? 개발 환경을 구축하고 배포하기 위한 도구

 Vagrant에서 관리하는 개발 환경은 VirtualBox나 VMware와 같은 로컬
 가상화 플랫폼으로 클라우드나 docker 같은 컨테이너에서도 실행 가능
 완전한 휴대용 개발 환경을 만들고 관리하기 위한 프레임워크와 구성
 형식을 제공하며 다양한 환경 간 이동 가능.
- 2. Vargrant 설치: https://www.vagrantup.com/downloads.html 및 https://ncube.net/14048 참고 각각 PC의 OS에 맞는 프로그램을 다운로드 받아 설치

순 서	코 드
① vagrant 다운로드	\$ wget https://releases.hashicorp.com/vagrant/2.1.2/vagrant_2.1.2_x86_64.deb \$ sudo dpkg —i vagrant_2.1.2_x86_64.deb <trouble shooting=""> dpkg: error: dpkg frontend is locked by another process Troubleshooting: "dpkg: error: dpkg frontend is locked by another process" If you see the error "dpkg frontend is locked by another process" while running the above described method, you'll have to do an additional step. First, find out the id of the process that is holding the lock file. Isof /var/Iib/dpkg/lock-frontend The above command will give you the PID of the processes using the lock files. Use this PID to kill the process. sudo kill —9 PID Now you can remove the lock and reconfigure dpkg: sudo rm /var/Iib/dpkg/lock-frontend sudo dpkg —configure —a 참고사이트: https://itsfoss.com/could-not-get-lock-error/</trouble>
② vagrant 설치 여부 및 version 확인	\$ vagrant version eodahee@peer4:~/hyperledger-indy\$ vagrant version Installed Version: 2.2.6 Latest Version: 2.2.6 You're running an up-to-date version of Vagrant!

순 서	코드
③ vagrant plugin 설치	\$ vagrant plugin install vagrant-disksize eodahee@peer4:~/hyperledger-indy\$ vagrant plugin install vagrant-disksize Installing the 'vagrant-disksize' plugin. This can take a few minutes Fetching: vagrant-disksize-0.1.3.gem (100%) Installed the plugin 'vagrant-disksize (0.1.3)'!
④ ubuntu/xenial64 box 다운로드	\$ vagrant box addprovider virtualbox ubuntu/xenial64 eodahee@peer4:-/hyperledger-indy\$ vagrant box add ubuntu/xenial64 => box: Loading metadata for box 'ubuntu/xenial64' box: UBL: https://vagrantcloud.com/ubuntu/xenial64' =>> box: Adding box 'ubuntu/xenial64' (v20191015.0.0) for provider: virtualbox box: Downloading: https://vagrantcloud.com/ubuntu/boxes/xenial64/versions/20191015.0.0/provider s/virtualbox box box: Download redirected to host: cloud-images.ubuntu.com =>> box: Successfully added box 'ubuntu/xenial64' (v20191015.0.0) for 'virtualbox'!
⑤ 설치된 box list 확인	\$ vagrant box list eodahee@peer4:~/hyperledger-indy\$ vagrant box list ubuntu/xenia164 (virtualbox, 20191 <u>0</u> 15.0.0)
⑥ Vagrantfile 다운로드	\$ vi Vagrantfile https://github.com/hlkug/meetup/tree/master/000000/vagrant/hy perledger_indy/Getting_Started/Vagrantfile 위 url의 내용 복사해서 파일 만들기
⑦ vagrant 생성하기	<pre>\$ vagrant up \$ vagrant status eodahee@peer4:~/hyperledger-indy\$ vagrant status Current machine states: indy-1 running (virtualbox)</pre>
® VM 접속	\$ vagrant ssh indy-1 eodahee@peer4:~/hyperledger-indy\$ vagrant ssh indy-1 Welcome to Ubuntu 16.04.6 LTS (GNU/Linux 4.4.0-165-generic x86_64) * Documentation: https://help.ubuntu.com
⑨ VM 중지 및 재시작	\$ vagrant halt indy-1 → 중지 \$ vagrant up indy-1 → 재시작 \$ vagrant destory indy-1 → 삭제 but, 삭제하고 다시 시작하면 오래걸리니 중지를 사용하길 추천!!
